

A Input and existing memory

Existing record f1: participant's workplace = Saebom Library

Reading 1: "My son Doyun works at Daehan Post. Save it as his workplace, not mine."

Reading 2: "Doyun, not me, works at Daehan Post. Add my son's workplace information."

B Same model proposal for every rule

APPEND Doyun's workplace → Daehan Post

CORRECT participant's f1 → Daehan Post

Shared reply (excerpt): "I'll remember that your son Doyun works at Daehan Post."

The reply distinguishes the son; the second memory operation does not.

C Executed state

ALLOW / LITERAL

Doyun → Daehan Post

participant → Daehan Post

Both admit the wrong update: the value occurs in both readings but belongs to another person.

AGREE / WITNESS

Doyun → Daehan Post

participant → Saebom Library

The unsupported update is held; the witness for the participant's record is not affirmed.
