

A Attribution: recovery need not require evidence checks

Gemini 2.5 Flash, same saved proposals

Final-state reading: evidence checks add 33 points.

Replay: Allow recovers the same 11 corrections; in 16 of 17 traced holds, the corrected tuple was missing from both fact lists.

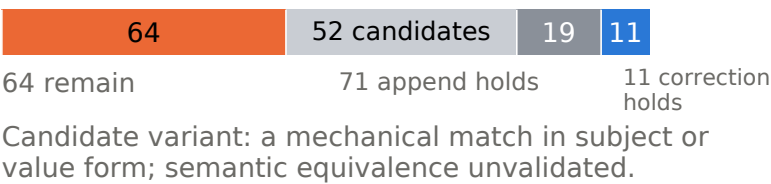

B Specification: avoided violations include candidate variants

21 configurations, same saved Review proposals

Final-state reading: the gate cuts violations from 146 to 64.

Replay: 71 of the 82 come from append holds shared by every rule; 52 meet mechanical candidate-variant criteria.

146 reference-violating states; 82 avoided

C Opportunity: many rule ties have zero exposure

Configurations whose proposals reach the held set H

Final-state reading: the rules are equivalent.

Replay: on hollow configurations no proposal reached H, so these outputs do not test distinguishing decisions.
